

Ivory 2

Trifolium repens

Ivory 2 was selected for improved crown density and increased stolon activity; leading to increased persistence. It is a medium-leaf type, but yields are comparable to the larger leafed ladino types. It has shown good resistance to Sclerotinia. Ivory 2 is an excellent choice when both yield and persistence are needed.

Key Features

- High Yields
- Good Persistence
- Aggressive Growth
- Disease Resistant
- Heat Tolerant

Ivory 2 is suitable for intensive, rotational and continual grazing systems; pasture and erosion control and soil stabilization. It's compatible in mixtures with forage grasses and well suited to overseed grass pastures.
