

# COMPETITION GRADE™

## PERFORMANCE TESTED GENETICS

- Provide higher shear strength increasing player safety
- Respond better to wear providing a more robust playing surface
- Resist major diseases and lower maintenance budgets
- Increase aesthetics through improved genetic color
- Express rhizomatous growth habit for damage recovery
- Include options for actively growing under lower light for stadiums, as well as earlier and later season play.

## FEATURING

- Germination in cooler soils temperatures
- Lower set crown provides higher wear tolerance and less winter damage
- Increased drought tolerance and recovery

- Top-rated for vegetative ground cover and cover after wear
- Superior Density
- Excellent wear tolerance
- Quick establishment and early spring green-up
- High Drought tolerance
