

Flying A

COMMON NAME: Annual Ryegrass

SPECIES: Lolium multiflorum

Flying A was developed from specially selected genetics that are widely adapted to various soil and climatic conditions. With the stockman in mind, Flying A was bred for higher yields of palatable forage. An earlier maturing variety, Flying A establishes quickly and will transition quickly in the spring to allow warm season grasses to flourish early. Exhibiting characteristics such as high forage yield, excellent crown rust resistanace and quick establishment, Flying A is a logical choice to include in a progressive forage production program.

EARLY MATURITY

USAGE	LIVESTOCK				
Pasture	Beef Cattle				
Hay	Dairy Cattle				
Silage	Sheep/Goats				
Green Chop	Horses				

SEEDING RATES

Drill: 25-30 lb per acre

Broadcast: 30-35 lb per acre

Overseed: 25-40 lb per acre

Flying A

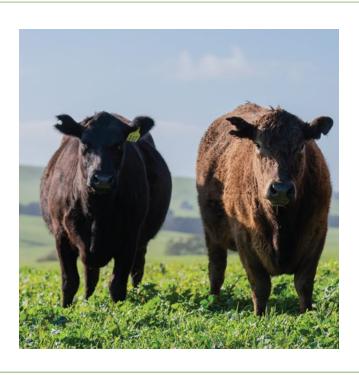

Forage

Annual Ryegrass

SEED COUNT:

210,000 seeds/lb

FERTILIZER MANAGEMENT

- Always take a soil test and consult your local extension service or fertilizer dealer for specific recommendations.
- Correct soil acidity, best between 5.5 and 7.
- Sowing: depending on the results of the soil test, a complete fertilizer such as 16-16-16 is helpful for establishment.
- A minimum of 30-40 units of nitrogen after each grazing or cutting will maximize forage production.

SOIL TYPE

Adapted to a wide variety of soil types from clay loam, to sandy loam. Can tolerate periodic flooding of no more than a week.

GRAZING MANAGEMENT

- · Graze lightly when grass reaches 6 inches.
- Never graze below 3 inches.
- Short intensive grazing is ideal.
- · Avoid grazing when frozen.
- Rotate out of grazing for 14-21 days.

CUTTING MANAGEMENT

- · Never cut below 3 inches.
- · Highest quality is at vegetative maturity.
- Optimum level of yield to quality ratio will usually maximize at boot stage.
