

Triangle T

COMMON NAME: Tetraploid Annual Ryegrass

SPECIES: *Lolium multiflorum*

Triangle T tetraploid annual ryegrass is the result of crossing TAMTBO and Prine ryegrasses with a selection taken from a VNS production field in Oregon. Excellent seedling vigor, fast establishment, and greater numbers of reproduction and vegetative tillers characterize Triangle T. Tested throughout the Southern US, Triangle T shows excellent forage yields with good crown rust resistance.

MEDIUM MATURITY

USAGE	LIVESTOCK
Pasture	Beef Cattle
Hay	Dairy Cattle
Silage	Sheep/Goats
Green Chop	Horses

SEEDING RATES

- Drill: 25-30 lb per acre
- Broadcast: 30-35 lb per acre
- Overseed: 25-40 lb per acre

Triangle T

Forage

COMMON NAME:
Tetraploid Annual Ryegrass

SEED COUNT:
180,000 seeds/lb

FERTILIZER MANAGEMENT

- Always take a soil test and consult your local extension service or fertilizer dealer for specific recommendations.
- Correct soil acidity, best between 5.5 and 7.
- Sowing: depending on the results of the soil test, a complete fertilizer such as 16-16-16 is helpful for establishment.
- A minimum of 30-40 units of nitrogen after each grazing or cutting will maximize forage production.

CLIMATE

MONTHS OF SOWING

5,6				●	●							

SOIL TYPE

Adapted to a wide variety of soil types from clay loam, to sandy loam. Can tolerate periodic flooding of no more than a week.

GRAZING MANAGEMENT

- Graze lightly when grass reaches 6 inches.
- Never graze below 3 inches.
- Short intensive grazing is ideal.
- Avoid grazing when frozen.
- Rotate out of grazing for 14-21 days.

CUTTING MANAGEMENT

- Never cut below 3 inches.
- Highest quality is at vegetative maturity.
- Optimum level of yield to quality ratio will usually maximize at boot stage.
